

THIS PROJECT WAS SUPPORTED by Wildlife Restoration funds, through grants administered by the U.S. Fish and Wildlife Service, Wildlife & Sport Fish Restoration Program: *Partnering to fund conservation and connect people with nature.*

CHARACTERISTICS OF U.S. TRAPPERS

Introduction

REGULATED TRAPPING IN THE UNITED STATES IS AN IMPORTANT TOOL for managing numerous wildlife species and habitats, protecting public and private property, protecting endangered and threatened wildlife, and restoring wildlife populations. In addition, as a state-sanctioned sustainable use of wildlife resources, regulated trapping provides opportunities for harvest of wildlife and “locavore” lifestyles. It is also important to individuals and families as a way of connecting with the outdoors and providing seasonal sustainable income.

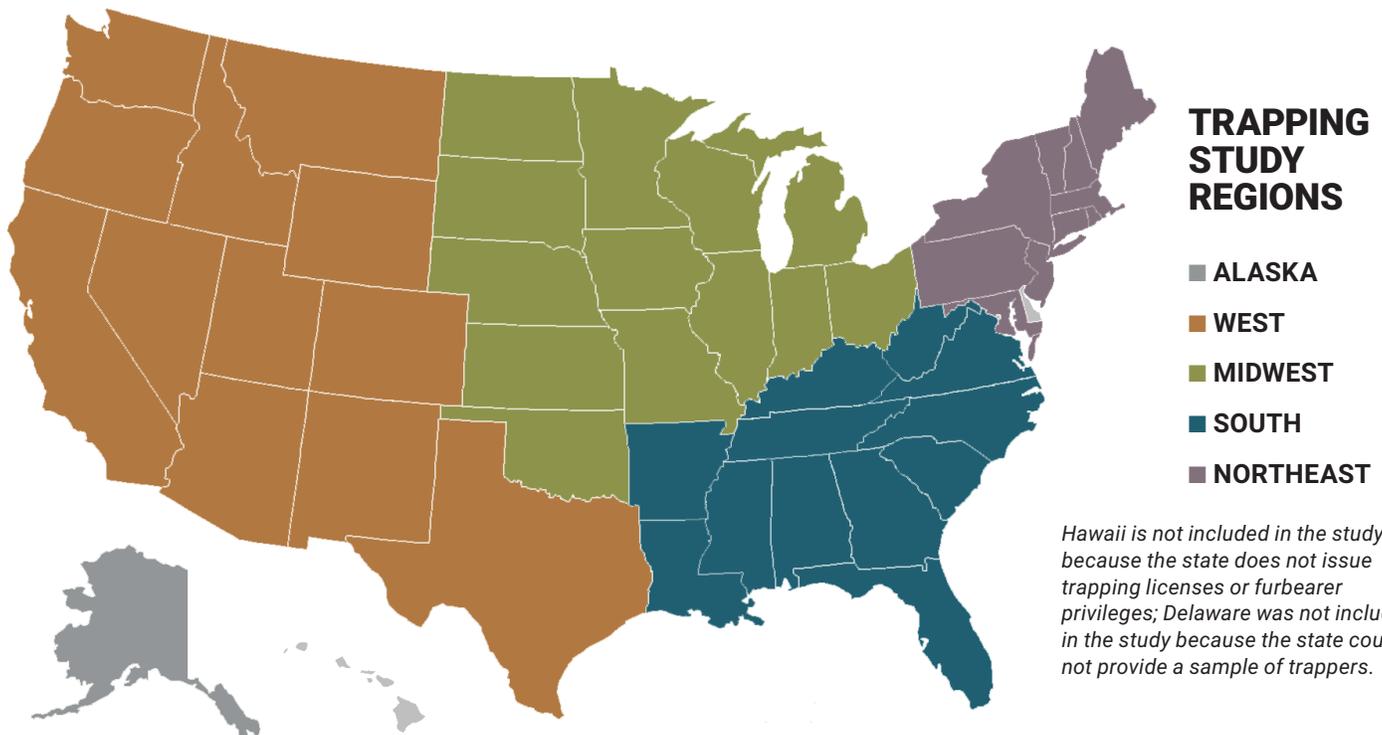

The survey discussed in this brochure was conducted by Responsive Management during 2015, for the Association of Fish and Wildlife Agencies (AFWA). The goal of the survey was to collect updated information and trend data regarding the use of traps nationally, regionally, and by state. Trappers from 48 states participated in the survey. Because Hawaii does not issue trapping licenses or furbearer privileges and Delaware could not supply a sample of trappers, those states did not participate in the study.

Throughout this report, findings of the survey are reported at a 95% confidence interval. For the entire sample of 6,668 licensed trappers, the sampling error is at most plus or minus 1.18 percentage points.

SAMPLING ERRORS, NATIONALLY AND BY REGION

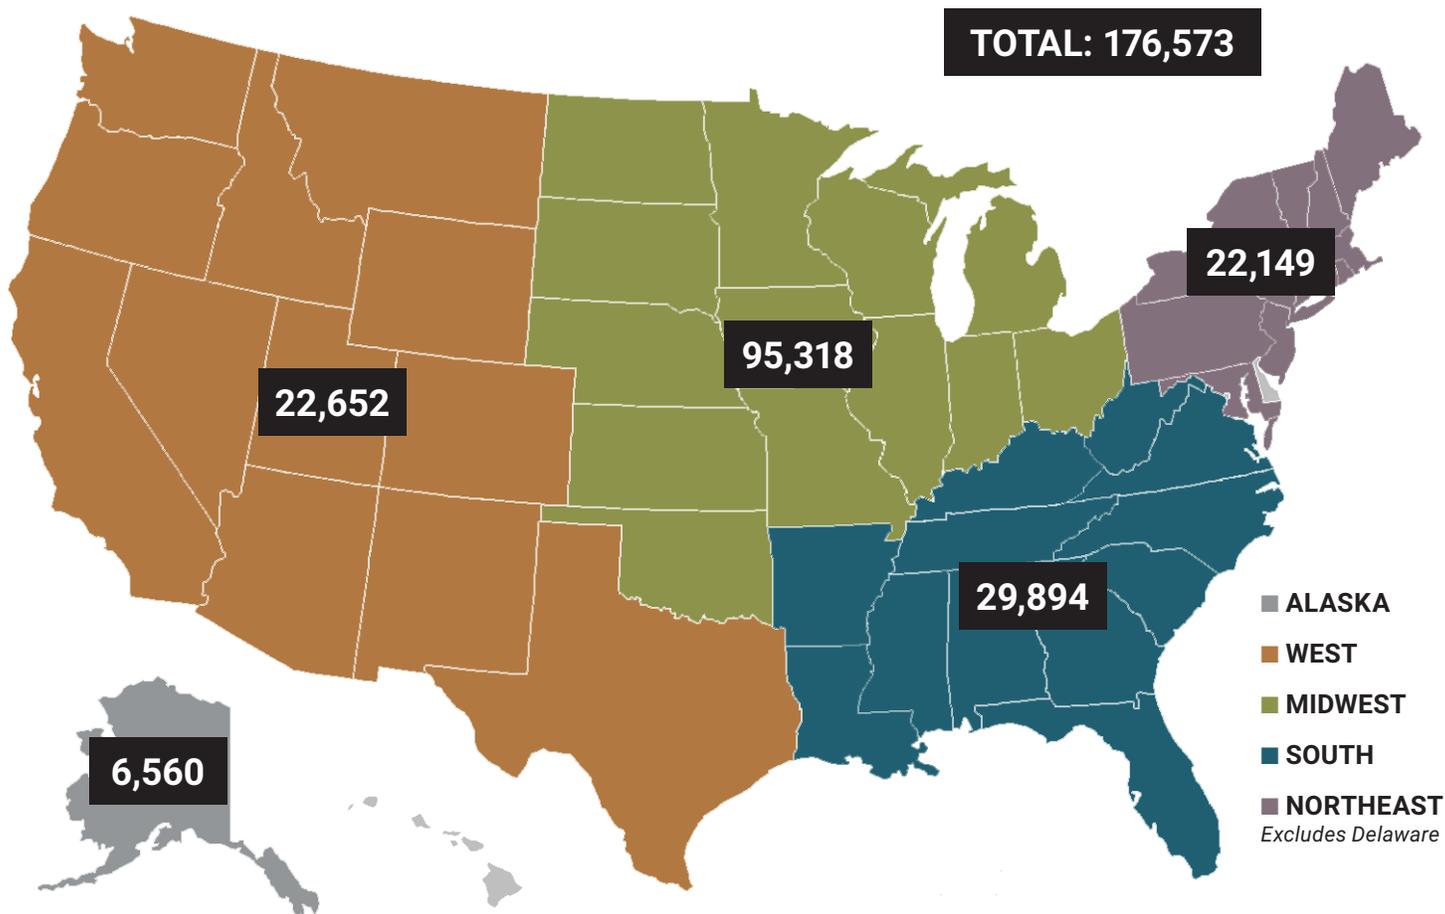

REGION	SAMPLE SIZE	POPULATION SIZE	SAMPLING ERROR
NATIONAL	*6,668	*172,407	1.18
Alaska (by itself)	105	6,560	9.49
West (AZ, CA, CO, ID, MT, NV, NM, OR, TX, UT, WA, WY)	1,563	18,486	2.37
Midwest (IL, IN, IA, KS, MI, MN, MO, NE, ND, OH, OK, SD, WI)	2,315	95,318	2.01
South (AL, AR, FL, GA, KY, LA, MS, NC, SC, TN, VA, WV)	1,544	29,894	2.43
Northeast (CT, DE, ME, MD, MA, NH, NJ, NY, PA, RI, VT)	1,141	22,149	2.83

**In the analyses, Texas was removed from national and regional results because it had too few respondents; thus, the total sample is 6,668 licensed trappers and the total population is 172,407 for the sampling error equation.*

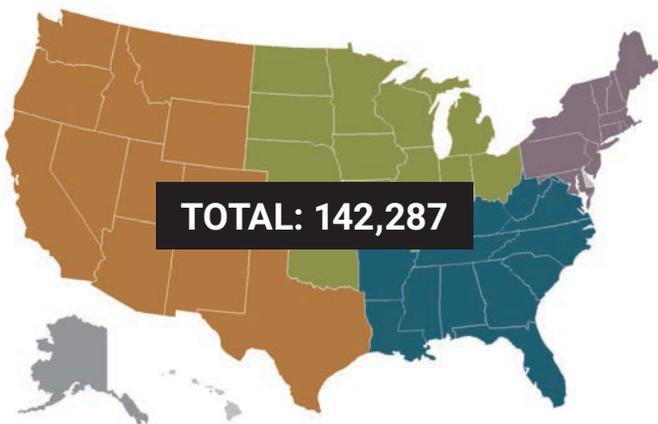

ESTIMATED NUMBER OF LICENSED TRAPPERS (2014-2015)

Through a combination of data provided by the states and data provided by the survey, Responsive Management estimates that there were **176,573 LICENSED TRAPPERS** in the United States in the 2014-2015 seasons. The tabulation shows the estimates in the regions; the Midwest leads the nation in number of licensed trappers.

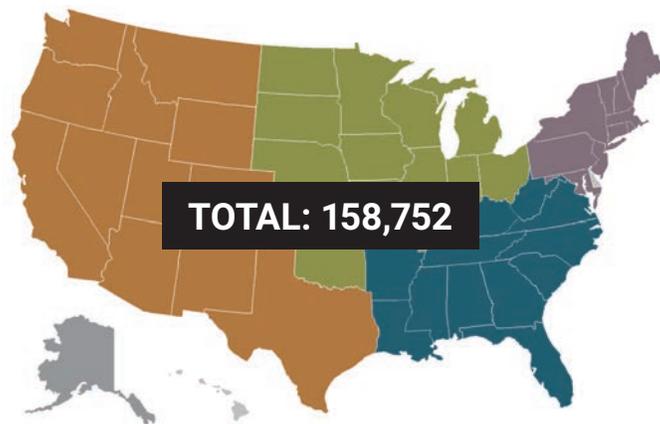

ESTIMATED NUMBER OF LICENSED TRAPPERS (2003-2004)

In 2003-2004, over half of all U.S. trappers (75,685) were in the Midwest.

ESTIMATED NUMBER OF LICENSED TRAPPERS (1989-1990)

In 1989-1990, about half of all U.S. trappers (78,919) were in the Midwest.

Selected Findings

GENERAL TRAPPING INFORMATION

36.7

The mean number of days participants trapped Trappers in the West and the South had the highest mean days of trapping (44.9 and 43.5 days, respectively).

49%

During the past 15 years, just under half of respondents trapped no more than 5 of the 15 years. The mean number of years trapped in the past 15 years is 7.4 years.

99.6%

Nearly all trappers responded that they trap in their home state during a typical trapping season. A small percentage of trappers trap outside their home state (3%).

ISTOCKPHOTO

60%

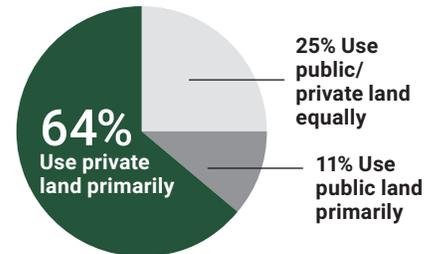

Trappers who had been contacted by a landowner to trap nuisance wildlife. For 70% of trappers, removal of nuisance wildlife plays some part in their trapping, although typically only about a quarter of their trapping involves nuisance wildlife removal.

30%

Percentage of Alaska trappers who say that removal of nuisance wildlife plays some part in their trapping, compared with 68%-74% in the regions in the lower 48 states.

PRIVATE LAND PREDOMINATES IN TRAPPING OVERALL.

Conversely, in the Alaska region, public land predominates, with 61% using public land mostly and 94% using public land at least half the time.

AVERAGE TRAPPING EXPENDITURES

For 2016, trappers were asked about their expenses in the previous 12 months. On average, trappers spend ...

\$246.36

On traps and lures

\$149.24

On other equipment, such as tools, skinning knives, etc.

\$344.86

On travel

\$730.85

On major trapping-related items, such as 4-wheelers, snowmobiles, boats, and motors

\$1,694.24

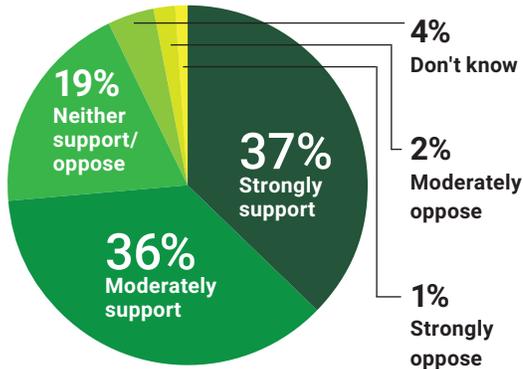

Overall expenditures

BEST MANAGEMENT PRACTICES (BMPS)

42% of trappers have heard of BMPS for trapping

Of those who have heard of BMPS, **64%** know a *great deal* or a *moderate amount*

OVERALL, DO YOU SUPPORT OR OPPOSE BEST MANAGEMENT PRACTICES?

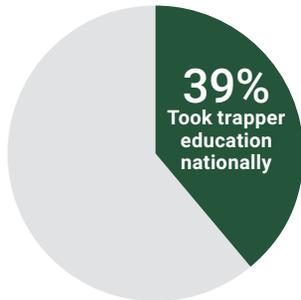

Among trappers who support BMPS, the most common reasons given for this support are for **HUMANE / ETHICAL/ANIMAL WELFARE REASONS (34%)**, that it is **GOOD FOR ANIMAL POPULATIONS (24%)**, that it is **GOOD FOR THE FUTURE OF TRAPPING (20%)**, that it is **GOOD TO HAVE GUIDELINES (20%)**, and that it is **GOOD TO EDUCATE THE PUBLIC/IMPROVE THE IMAGE OF TRAPPING (17%)**.

Among trappers who oppose BMPS, the most common reason given for this opposition is that there is **TOO MUCH REGULATION OR THE REGULATION IS TOO UNIVERSAL (51%)** – by far the top response. Both of these questions were open-ended and allowed multiple responses to be given.

Among trappers who have heard of BMPS, **66%** currently use them and plan to continue

TRAPPER EDUCATION AND ORGANIZATION MEMBERSHIP

RESPONDENTS MOST OFTEN TOOK TRAPPER EDUCATION COURSES in the Northeast: **79%** did so, which far exceeds any other region (from 20% to 37%).

NATIONWIDE, 32% OF TRAPPERS belong to a trapper organization: **26%** belong to a state trapper association in their state of residence and **2%** belong to a state trapper association not in their state of residence. **11%** belong to the National Trappers Association, and **4%** belong to Fur Takers of America.

TRAPPER ORGANIZATION MEMBERSHIP RATES are highest in the Northeast region (**42%**) and the West region (**37%**) and are lowest in the Alaska region (**24%**).

49% took a course sponsored by a state agency

PRIMARY TARGET SPECIES

Nationally, when asked to name the top four species most important to their trapping, trappers most often selected:

62%
RACCOON

55%
COYOTE

37%
MUSKRAT

33%
BEAVER

30%
RED FOX

27%
BOBCAT

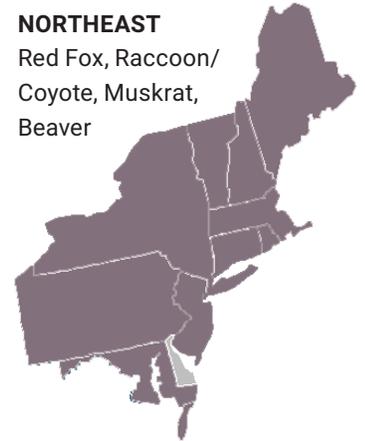

Regionally, the four most important species were:

ALASKA
Marten, Beaver,
Canada Lynx,
Wolverine

MIDWEST
Raccoon, Coyote,
Muskrat, Beaver

NORTHEAST
Red Fox, Raccoon/
Coyote, Muskrat,
Beaver

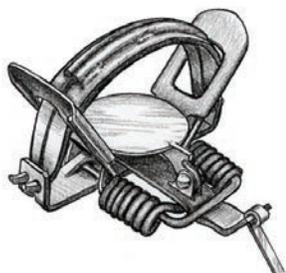

WEST
Bobcat,
Coyote,
Beaver,
Red Fox

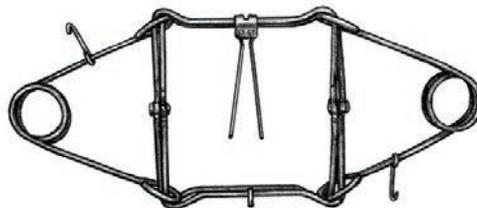

SOUTH
Coyote, Raccoon,
Bobcat, Gray Fox

MOST COMMONLY USED TRAP TYPES (NATIONALLY)

86%
of trappers use

DEMOGRAPHICS

98%

of trappers are male. This corresponds to previous years: 99% of trappers were male in the 2004 study.

47.7

The mean age of trappers. There are few trappers in the < 24 years age group; 90% of all trappers are over 24 years old.

\$40,000 to \$59,999

The average household income (pre-tax) of respondents most often falls in this range (18% gave a response in this range).

TRAPPING INCOME

21%

Trappers who responded that their trapping has been a **very** or **somewhat important** source of income over the past 3 years.

TRAPPERS MOST OFTEN SAID THEY SELL FURS using a local fur dealer (48%), at a Canadian auction (17%), or at an in-state auction (13%); note that 23% have not sold furs. Local fur traders were the most commonly used means of selling furs in every region.

ASSOCIATION *of*
FISH & WILDLIFE
AGENCIES

Our Purpose

AFWA'S FURBEARER MANAGEMENT AND BEST MANAGEMENT PRACTICES FOR TRAPPING PROGRAM (BMPs) aims to improve regulated trapping by evaluating trapping devices and techniques used for the capture of furbearers and educating those who use traps about the most humane, safe, selective, efficient and practical devices.

Traps are evaluated using standards and protocols developed by the International Organization for Standardization (ISO).
