

CONTINENTAL CONSERVATION DELIVERY

U.S. WATERFOWL AND CANADIAN BREEDING GROUNDS: A RACE AGAINST TIME

To maintain or grow waterfowl populations, we must conserve breeding habitat. Here's what's at stake up north:

70%
LOST

✚ In southern Canada, up to 70% of wetlands are gone, with losses as high as 95% in densely populated regions.

80
ACRES

✚ Every day in Canada, 80 acres of wetlands vanish — the equivalent of about 61 football fields.

74%
LOST

✚ 74% of native grasslands have been lost, and since 1970, half of Canada's grassland birds have disappeared.

Investing now will result in savings over the long term:

- ✚ Compared to the U.S., we still have more opportunities for conservation in Canada. Saving intact wetland and grassland complexes provides immediate ecological value that restorations may take years to attain.
- ✚ As land prices increase, the cost of conservation will continue to increase over time.
- ✚ Now is the time to take advantage of favorable exchange rates, often exceeding 30%.

EASTERN CANADA

Fall Flights is restoring small wetlands that provide waterfowl brood-rearing habitat, boost water quality, biodiversity and watershed health.

PRAIRIE POTHOLE REGION

Fall Flights is conserving, restoring and managing wetland-grassland complexes to provide waterfowl nesting habitat while keeping working landscapes intact.

WESTERN CANADA

Fall Flights is restoring wetlands and strengthening coastal systems to support waterfowl and build climate resilience.

"FALL FLIGHTS IS ABOUT CONNECTING LANDSCAPES IN CANADA WITH THOSE IN THE U.S. THAT'S WHY WE TARGET STATE INVESTMENTS IN PROVINCES AND REGIONS WITH THE STRONGEST CONNECTIONS TO INDIVIDUAL STATES FOR WATERFOWL AND OTHER MIGRATORY BIRDS."

— PAT KEHOE, ACTING CEO — DUCKS UNLIMITED CANADA

BUILD A HEALTHIER CONTINENT: FROM DUCKS TO DIVERSE LANDSCAPES

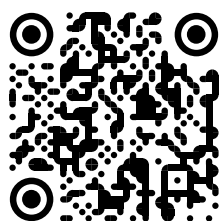

While conservation delivery begins with waterfowl, the ultimate goal is to build resilient landscapes that support diverse fish and wildlife populations, strengthen watershed health and tackle global challenges associated with changing weather patterns, biodiversity loss, and water stewardship.

LOOKING AHEAD TO 2026: CONTINUED PARTNERSHIP, CONTINUED IMPACT

- ✦ Investing today will leave a legacy for generations.
- ✦ Joint conservation work ensures that migration and the traditions that depend on it endure.
- ✦ We're close to the finish line — help us reach our Uniting States for Fall Flights campaign interim goal of \$6 million in 2026. Every dollar accelerates habitat conservation across North America.

“WE’RE PUTTING YOUR DOLLARS TO WORK BY CREATING HEALTHIER WATERSHEDS FOR LANDOWNERS, COMMUNITIES, WATERFOWL AND MANY OTHER SPECIES OF MIGRATORY BIRDS AND WILDLIFE THAT DEPEND ON THESE LANDSCAPES.”

— STEPHEN CARLYLE, CEO — MANITOBA HABITAT CONSERVANCY

CONSERVATION DELIVERY THAT WORKS FOR PEOPLE AND NATURE

Fall Flights helps to shape land use and policy that drives smarter waterfowl conservation across borders, ensuring strategies align with climate resilience, biodiversity goals, and community needs. And thanks to your state's investments, we're strengthening rural economies and community well-being:

Keeping ranchers on the land: Conservation easements help cattle producers maintain working landscapes and prevent conversion to cropland.

Restoring cropland to grassland: Strategic land acquisitions and restoration programs help restore former cropland to native grassland and return it to private ownership, creating habitat and supporting local economies.

Neighbor to neighbor: Fall Flights manages acquired lands responsibly, enhancing wildlife habitat while preventing flooding and invasive plants from impacting neighboring properties.
